

Mobile Credential

AN INNOVATIVE, FLEXIBLE AND COST-EFFECTIVE NEW FEATURE FOR ACCESS CONTROL

Infinias Mobile Credential provides convenient access control, allowing authorized users to request access to doors from their iPhone or Android phone – with the touch of a button.

MOBILE CREDENTIAL BENEFITS:

- ▶ **Convenience** – Request access to the doors at your facility with a touch of your phone. Mobile Credential is iOS and Android compatible and allows authorized users access to designated doors.
- ▶ **Increased security** – If a phone goes missing, the phone owner usually notices right away, unlike a card or fob that could go unnoticed or unreported for days. Phones are also less likely to be shared. Using a smartphone as a credential provides an increased layer of security by allowing users in a corporate setting to capitalize on their corporate mobile device policies to require authenticated device unlock by pin, gesture or biometric, effectively adding multi-factor authentication to Mobile Credential.
- ▶ **Log of events** – infinias Intelli-M Access software provides a record of each access control event and transaction, documenting each time a user's mobile phone is presented for use.
- ▶ **Simplified credentials management** – If a phone is lost or an employee is terminated the credential can immediately and easily be deactivated to prevent unauthorized access.

infinias Mobile Credential License Packs

Available in 10, 20, 50 and 100-pack increments. Each license authorizes one Android phone or iPhone.

Licenses	Part Number
10 Pack License	S-IMC-10
20 Pack License	S-IMC-20
50 Pack License	S-IMC-50
100 Pack License	S-IMC-100

Frequently Asked Questions about Mobile Credential

What are the requirements to use Mobile Credential?

- ▶ infinias Intelli-M Access 4.0 software or higher
- ▶ Free downloadable iOS/Android mobile app
- ▶ Mobile Credential Server installed and configured
- ▶ Mobile Credential License Pack (available in 10, 20, 50, or 100-packs)

How does Mobile Credential work?

Mobile Credential works with infinias Intelli-M Access 4.0 (or higher) software to provide a smartphone based credential that can be used in one of two ways on a person by person basis. Either by requiring the smartphone be on the corporate network directly via WiFi, thus requiring proximity to the building, or via any internet connection allowing use of Mobile Credential from anywhere a data connection can be made with the smartphone. In one installation, some people can be required to be in proximity to the building (within WiFi range) while others can use their Mobile Credential from anywhere at the administrator's discretion.

Network administrators can add a Mobile Credential License Pack and then create temporary activation keys for any Person in the system and define when that credential becomes active and when it expires. Both include the date and time so for example, a credential can be active only for a few hours. Once activated the temporary key is replaced with a permanent key unknown to the user and locked to the device. All communication is over SSL ensuring a secure conversation with the access control system.

People with a Mobile Credential only get the list of doors they have access to downloaded to their device and all decisions are made by the access control system, not on the device. If a Mobile Credential is disabled in the access control system, the effect is immediate and the information on the device is no longer of any use.

Status	Type	Credential	Activation Date	Activation Time	Expiration Date	Expiration Time	Disabled
Mobile		JohnUniqueKey123	11/20/2013	11:02 AM			<input type="checkbox"/>

How do I set up Intelli-M Access to work with Mobile Credential?

Two steps are required for configuring Intelli-M Access for the Mobile Credential feature:

- ▶ Add a Mobile Credential license pack Intelli-M Access
- ▶ Configure users to their Mobile Credential license number within Intelli-M Access

Please refer to your manual on the exact steps on how to set up Intelli-M Access to work with Mobile Credential.

How do I activate Mobile Credential on a phone (or other smart device)?

In order to activate a phone, you will need:

- ▶ The free Mobile Credential iOS/Android mobile app, installed
- ▶ Mobile Credential license and system information

After inputting the mobile credential license information into Intelli-M Access, you put the unique license code, IP address of the server, and the port information into the phone itself.

Can I use cell data with Mobile Credential?

Yes. Using cell data requires a different setup. Please contact infinias for more information.

Can I deactivate Mobile Credential on a phone?

Yes. You can deactivate a license anytime from Intelli-M Access and access will be denied immediately. Administrators may also set a future activation or expiration date & time of a mobile credential so that activation and expiration may happen automatically.

Can I transfer a Mobile Credential license to another phone?

No. You cannot re-activate a license after it has been deactivated or have two licenses running simultaneously. Once a credential has been activated on a device, it is permanently tied to the device, and cannot be transferred or replicated. This is a safety feature of Mobile Credential that ensures the integrity of your system.

Will Mobile Credential still work if my network goes down?

No. Unlike physical access cards, Mobile Credential requires a network connection to function properly. The Mobile Credential server must be able to communicate with Intelli-M Access in order to request access to a door. Intelli-M Access allows multiple credentials for each person, and having a physical access card is encouraged.
